Enabling Multi Operating Companies

1

Define & Implement
secure authentication
and authorization

2

Design interoperable
communication streams
(e.g. APIs)

3

Establish data
governance and privacy
measures

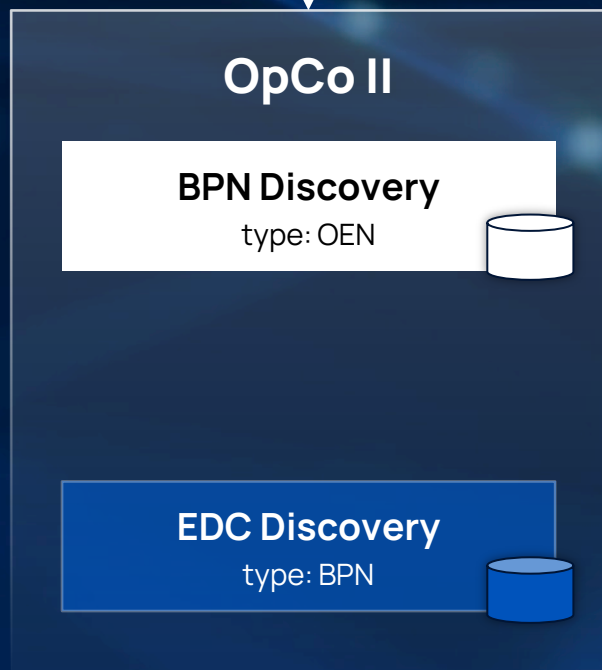

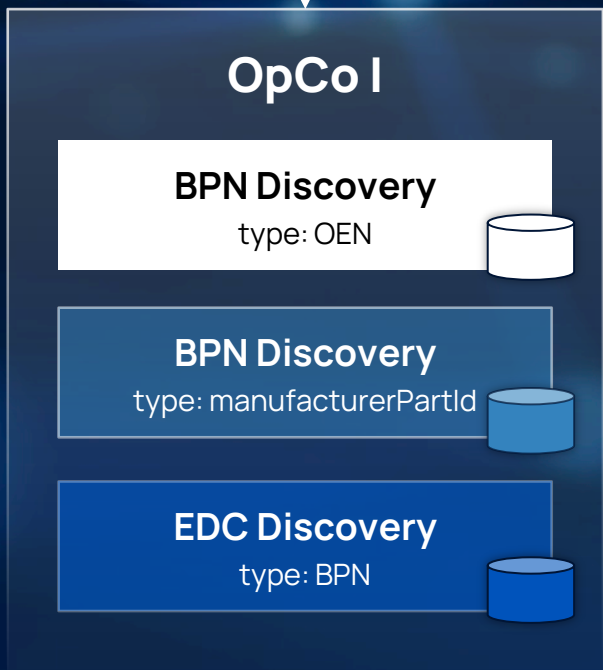

4

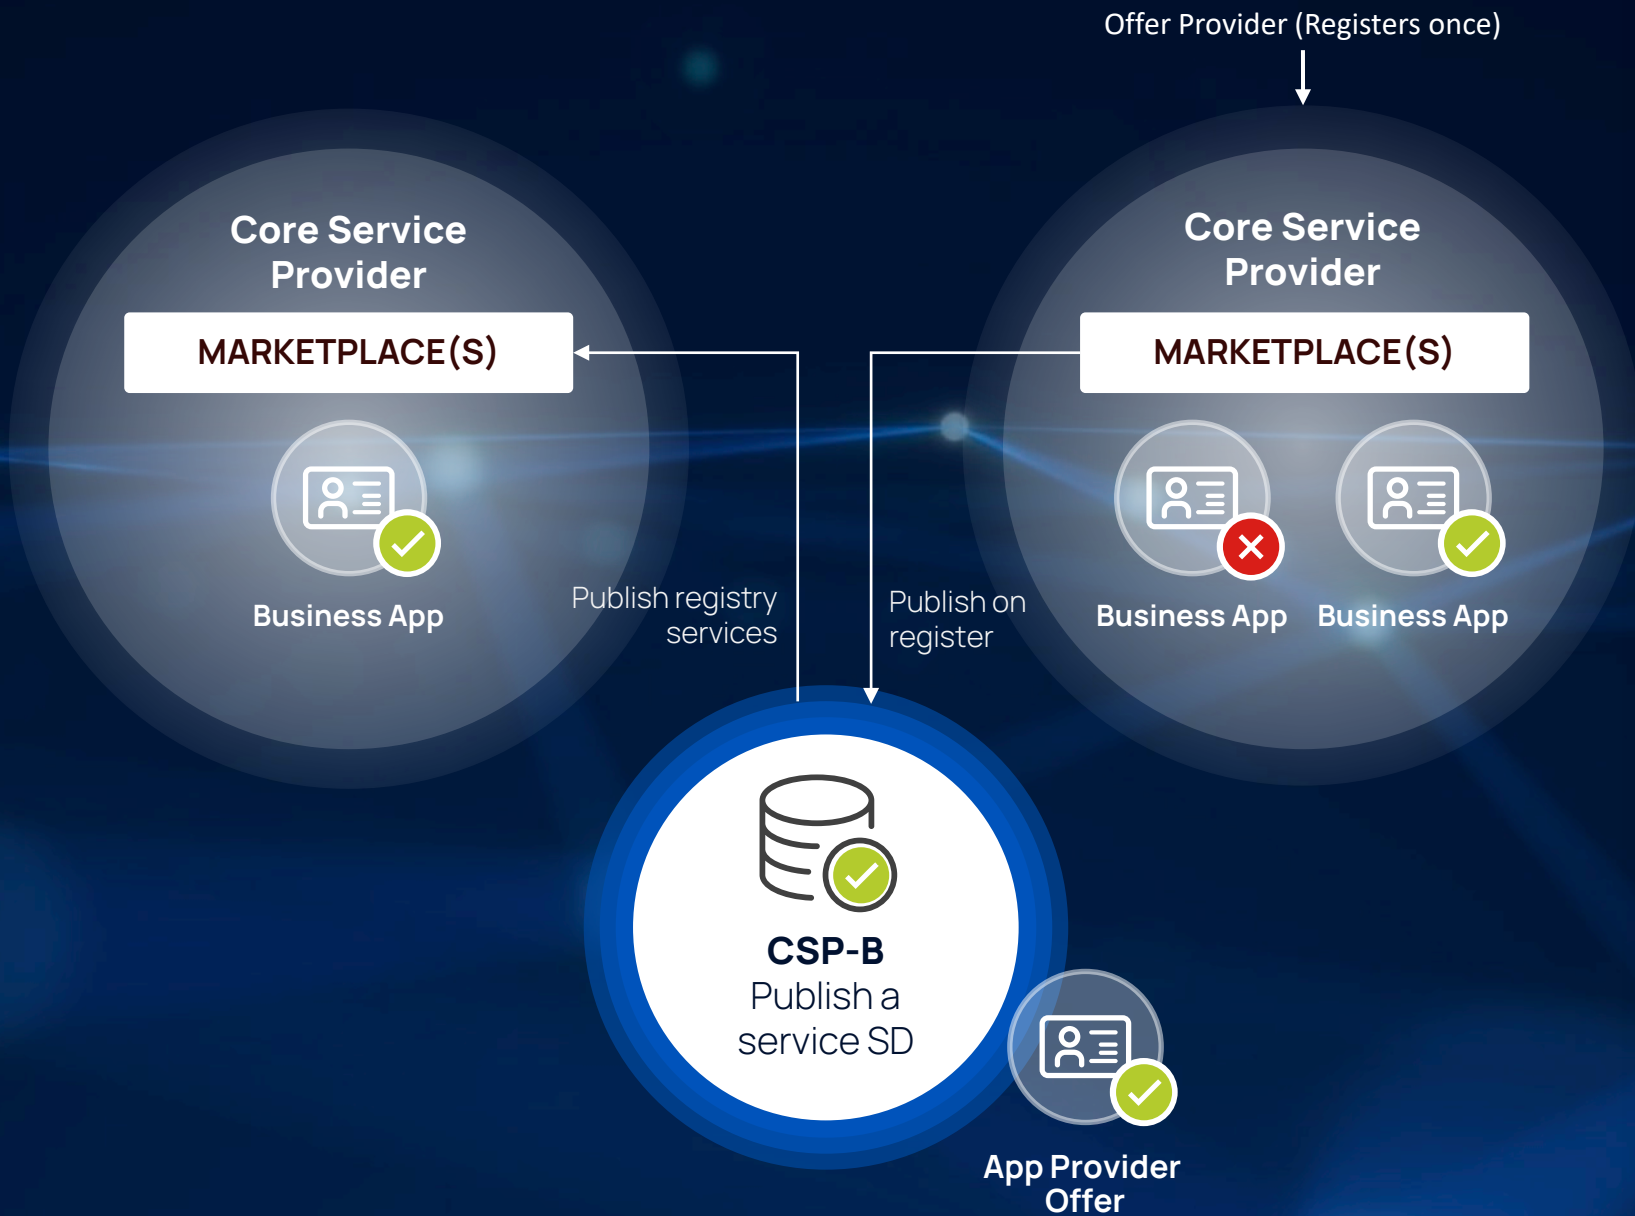

Prototyping, testing &
reference solution release

CX Association

Customer and apps approaching the „search“/“discovery“ via the discovery finder of the association which enables them to search through the complete network.

App and Service Providers can list their offerings on Marketplace A, with the option to synchronize their listings with the broader Catena-X dataspace registry.

This registry is accessed by various Catena-X marketplace operators and made available to their customers.

Key Points:

- App Provider can choose
- Simplified process for offering apps and services across multiple Catena-X marketplaces.
